APPLICATION INFORMATION

As shown on the reverse side of this bulletin; this hub is unique for trailer applications, in that the disc wheel mounting flange is located directly over the hub cap. This will extend the distance between brake drums and allow maximum width of axle track. This design is ideal for boat trailers, auto haulers and tag axles. Load capacity is 9000 lbs.

NOTE: When this hub is used the axle manufacturers must be advised of the special brake spider placement required in its use.
